Abstract

Human's decision making is changeable depending on their position in the organization that they belong to. The decision making that is done by an individual who has no various circumstances is simple. On the other hand, the decision making by one member of an organization has a trend to include circumstances a lot, so it has to be different from it as an individual.

This paper tries to verify some existing researches by using two kinds of decision making stories. One is the financial investment decision making. Another is the surgery decision making.
