触 2 点弁別閾に関する心理実験

A Psychological Experiment on the two-point discrimination threshold

林川 美由樹 (長崎大学経済学部)

Miyuki Hayashikawa (Faculty of Economics, Nagasaki University)

Abstract

This paper experiment on the two-point discrimination threshold (TPDT) in order to measure human's limitation of the tactile space threshold. This experimental result shows that the range of human's tactile space threshold is changeable depending on the degree of proficiency level of skill of the measurement point of body. Especially fingers show remarkable differences.
